CHROMATOGRAM & SAMPLE REFERENCE

HPLC CHROMATOGRAM

RT 1.017 / 6.699 / 7.103 min

How to read this. Chromatographic purity is the percentage of total integrated peak area — how much of the detected material is the target peptide versus impurities. It is **not** a measure of net peptide mass content (what fraction of the powder is peptide versus counter-ion, water, or residual solvent). That mass content is measured separately and reported above as **content per vial** (mg net peptide). Results apply only to the sample submitted.
